

Every year thousands of Construction Workers suffer injuries as a result of the negligent acts of employees of other contractors and the failure of companies with Construction Site safety responsibilities to carry out their duties in a reasonable manner.

[Richard L. Rumsey Ltd.](#) has represented the interests of Construction Workers for over 30 years. We know by first hand experience that injuries suffered at Construction Sites can be severe and life altering not only for the injured worker, but for their families too.

There are regulations, statutes, ordinances and industry standards that mandate a safe working environment for Construction Workers. Unfortunately, in many cases, we have found that these safeguards have been ignored and violated by General Contractors and others who are in charge of safety on Construction Sites, resulting in serious injury and loss of life.

According to the US Department of Labor Bureau of Labor Statistics, the Construction Industry has the highest number of worker fatalities of any industry.

Hazards posed at Construction Sites include unsafe scaffolds, ladders and supports, lack of fall protection, improperly operated heavy equipment, defective tools, failure to provide proper lifting equipment, improperly braced excavations and exposure to electricity and toxic materials.

Our experience with Crane, Forklift and Equipment Injury Claims will help us recover damages for you.

Our track record of recoveries for Construction Workers shows that we know how to investigate, pursue, and litigate Construction Site Injury Claims successfully.

Recent Construction Site Case Result:

Dangerous Construction Site

\$5,600,000 was recently recovered by us for injuries and death suffered as a result of Construction Negligence.

A railway rehabilitation construction project was proceeding in Chicago. Those in charge decided to place a dumpster for construction debris under an adjacent roadway viaduct. We established that such placement violated numerous safety standards and was the cause of a man's injuries and death.

Other Construction Site Case Results:

\$2,400,000 for operating engineer's death from a crush injury due to soil collapse.

\$2,000,000 for laborer who fell through a roof requiring a cervical fusion

\$1,900,000 for carpenter who was run over by a Bobcat and sustained a leg injury.

\$1,450,000 for estimator who fell through unprotected opening suffering hip fracture.

\$1,275,000 for drywall taper who fell from a manlift sustaining fractures.

\$846,000 for carpenter who was injured due to improper crane operation causing torn meniscus.

\$825,000 for tuckpointer who slipped on unsafe surface sustaining herniated disc.

\$770,000 for laborer who sustained electrical shock and suffered vascular injury.
